Vehicle Magnet Care Sheet

A simple guide to applying & taking care of your vehicle magnet

- 1.** The surface of the vehicle & surface of the magnet must be clean and dry.
- 2.** Apply magnetic sheet directly to the vehicle. Do not pull magnet to reposition.
- 3.** Ensure magnet is applied to a smooth and flat surface, avoiding any bumps or grooves.

The magnetic sheet must be removed from the vehicle twice per week, making sure both magnet and vehicle are wiped free of moisture and dirt. To clean use a soft cloth, warm water and detergent.

Never use chemical cleaners, brushes or high pressure cleaners on the magnet as it could damage the print.

To protect the magnetic sheet while not in use keep the sheet flat or stored in a loosely coiled roll (no smaller than 75mm diameter) with printed surface to the outside.

Do not set any objects on top of the magnetic sheet that might damage the surface
